

NJ HDDV Emissions Violations

**Records Trail
and
Interstate Data Sharing**

NJ HDDV Roadside Emissions Program - Current Status:

- Deployment of Laptop PC equipped DMV and SP teams is nearly complete
- Opacity violation records are collected and uploaded to the DMV central server
- Safety records are being exchanged between states
- emissions records are being tabulated by several states, but cannot be exchanged.

NJ HDDV Emissions violation records are now:

- Inputted via ASPEN on the State Defined pages
- uploaded to the SAFER 45 day mailbox
- available for retrieval by our roadside enforcement personnel
- stored in separate DMV mainframe data file for daily review and program analysis

Through CVISN, HDDV Emissions records will be:

- Uploaded to NJ SAFER/CVIEW
- used to create an emissions violation “snapshot” for roadside inspection inquiry
- made available for interstate viewing through SAFER/SAFETYNET
- store selected data in a TBD “warehouse” for national tracking and emissions trend analysis

Interstate Data Sharing will:

- Make emissions violation records readily available to other states enforcement personnel at roadside
- give them the ability to quickly screen a vehicle for inspection and verify the repair windows for violations
- benefit the trucking community by reducing the time vehicles are held at roadside, and allow truckers to complete their runs without being stopped for testing in every state.

NJ HDDV Emissions Violation Records Tracking and Storage
